Measurement Activities:

Have students record an estimate first and then the actual distance in inches and feet:

- Have students take one jump as far as they can. Measure how far they jumped from the line.
- Have the students get down on their knees and roll matchbox cars. Measure how far each of the cars rolled
- Have each student wad up a hand full of cotton balls and throw them as far as they can. Cotton balls will come apart. Measure how far the furthest cotton ball went.
- Measure each other: Choose either to measure arm length, height, foot or hand.

Item Measured	Estimate of Measure	Actual Measurement	Were you close?
