

<h2>Behavioral Adaptations</h2>	<h2>Instinct</h2>
<h2>Physical Adaptations</h2>	<h2>Migrate</h2>
<h2>Hibernate</h2>	 <p>A baby sea turtle knows to go towards the moonlight to find the ocean</p>
 <p>Leaf Butterfly</p>	 <p>Birds move from the cold north to the south</p>
 <p>Mimicry</p>	 <p>When a spider is born, it knows how to spin a web.</p>

Whales travel to follow their food.

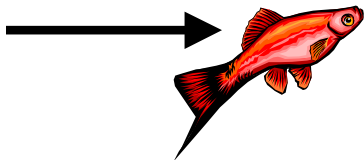

Groundhog

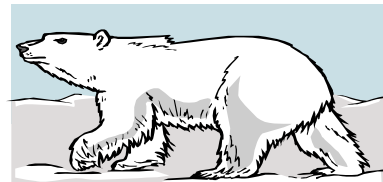

Praying Mantis

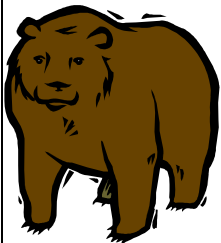

Porcupines can protect themselves.

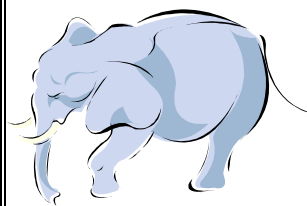

Fish have fins to help them swim.

Polar bears are white to help them hide.

Bears sleep during the winter. They lower their heart rate to save energy.

Elephants have big ears to cool themselves off.

Giraffes have long necks to reach the trees.

Some bats hibernate.
